HEALTH

**Cardiopulmonary  
Exercise  
Testing (CPET)  
and PFT**

**Musculoskeletal  
Rehabilitation**

<b>Patient Group</b>	<b>Essential</b>	<b>Recommended</b>	<b>Depending on Local Guidelines</b>
<b>A</b>	Smoking cessation (can include pharmacologic treatment)	Physical activity	Flu vaccination Pneumococcal vaccination
<b>B-D</b>	Smoking cessation (can include pharmacologic treatment) Pulmonary rehabilitation	Physical activity	Flu vaccination Pneumococcal vaccination

# FUSION HEALTH

- Allows for the differentiation of cardiac versus pulmonary limitations as a cause of exercise-induced dyspnea or impaired exercise capacity when traditional testing is inconclusive or non-diagnostic.
- Considered Gold Standard test for assessing functional capacity by the AHA, ACC, ACSM, ATS, ACCP, APTA, and Social Security Administration and provides a wealth of information beyond standard exercise EKG tests that are performed without breath by breath gas analysis.

## Cardiopulmonary Exercise Testing
